Digital Tax Intelligence for SAP[®]

Data-driven tax management

Build confidence in your automated tax decisions by taking control

The majority of sales and purchase transactions are handled without involving tax professionals.

With Digital Tax Intelligence, we help EY clients become trusted business partners by providing three essentials for efficient tax management. 1. Immediate transparency

With Digital Tax Intelligence you enjoy tax-tailored insights into business flows and system processes at your fingertips. Live monitoring dashboards provide management views and 360° panoramas of taxrelevant facts for sales and purchasing transactions. This helps in enabling the targeted reconcilement with the business and preventive risk management.

2. Data quality governance

Clear responsibility for tax master data is key to tax compliance. Digital Tax Intelligence is either used as a one-stop shop for customer, supplier and material master data maintenance or as a control instrument for validating master data. In either case, you create a governance process that relieves you from lengthy case-by-case reconciliations.

3. Intelligent decision-making

The automation of tax decisions is at the heart of efficient tax management. Digital Tax Intelligence lets you manage transactional tax decisions by using a flexible rule engine tailored for tax professionals. LogTech and monitoring features allow you to visualize business flows, data quality and tax decisions along with the legal structure of tax laws.

Digital Tax Intelligence for SAP is a ready-to-go solution for the automation of transactional tax decisions and data quality assurance.

90% Increased automation by data quality

Based on average of manual intervention in tax determination for five out of ten transactions (output 2/10, input 8/10)
